Listing of Claims:

Claims 1-12 (canceled)

Claim 13 (previously presented): A method for operating terminals of a mobile radio communication system, in at least one local wireless network, comprising:

storing at least one item of access information on a terminal, wherein the access information comprises at least one first item of identification information for the mobile radio communication system and at least one second item of identification information for a local area network,

wherein the second item of identification information comprises a first item of network information indicating the location of the local area network,

and wherein the second item of identification information comprises a second item of network information indicating the type of the local area network, and

wherein the second item of identification information comprises a third item of network information indicating at least one service provided by the local area network.

Claim 14 (previously presented): The method according to Claim 13, wherein the second item of identification information comprises a fourth item of network information uniquely identifying the local area network.

Claim 15 (previously presented): The method according to Claim 13, wherein the first, second and/or third items of network information are encoded by means of a maximum of three decimal digits.

Claim 16 (previously presented): The method according to Claim 14, wherein the fourth item of network information is encoded by means of a maximum of five decimal digits.

Claim 17 (previously presented): The method according to Claim 13, wherein the second items of identification information are stored as a first list organized in such a way that the first list contains those second items of identification information that are assigned to local area networks which allow the operation of the terminal within the local area network.

Claim 18 (previously presented): The method according to Claim 14, the second items of identification information are stored as a first list organized in such a way that the first list contains those second items of identification information that are assigned to local area networks which forbid the operation of the terminal within the local area network.

Claim 19 (previously presented): The method according to Claim 13, wherein the at least first item of access information is stored on a device serving for user identification, in particular a USIM module.
